Tabindex and keyboard focus

- `tabindex` attribute is part of the HTML 4 specification
- Support in **all** modern major browsers
- Values:
  - -1: Support keyboard focus/blur events, but do not add to tab order
  - 0: Support keyboard focus/blur events and add to tab order
  - >0: Support keyboard focus/blur events and add to tab order and tab using the numerical order of the tabindex values

- The `tabindex` is not currently valid for most elements
- Style focus visually to make is easy to find what has focus (i.e. do NOT rely of browser focus styling of focus)
